

One World One Water

center for urban water education and stewardship

"A good steward learns about our most precious natural resource - water, and reaches out to put that knowledge into action. Colorado's future will be shaped by our students, and their stewardship will determine the fate of our rivers, lakes and groundwater."

- Tom Cech, Director of the OWOW Center

Metropolitan State University of Denver's One World One Water Center for Urban Education and Stewardship (OWOW) prepares students to preserve and protect one of Colorado's most precious resources: Water.

The Water Studies Minor and Water Studies Certificate are an interdisciplinary field of study focused on water resources and conservation, management and law, multicultural issues, and conflict resolution. Careers in the water industry include: water resources experts, engineers, educators, foresters, biologists, ecologists, geographers, managers, regulators, hydrologists, public relations and marketing professionals, artists, and attorneys.
